LytePro7 Architectural LED Wall Sconce

Stonco has developed a comprehensive video that details how LytePro7 offers improved sustainability without sacrificing performance. See it here.

LytePro7 Architectural LED Wall Sconce

The Small Fixture with Big Performance

The all new LytePro7 Series wall-mounted luminaire from Stonco is less than half the size of traditional wall sconces but it delivers over twice the performance. LytePro7 is designed using high lumen output LED sources for maximum illumination and uniform distribution improving safety and security in perimeter lighting applications.

Along with new installations, the LytePro7 is ideally suited as a replacement for existing high pressure sodium, compact fluorescent and incandescent luminaires. LytePro7's sturdy construction and extended life can mean **it will be the last fixture you will ever need to buy!**

Thermal Imaging is now affordable!

Troubleshoot and identify potential problems before they happen with the IDEAL HeatSeeker™ Thermal Imager. What makes HeatSeeker so useful are the dual cursors that instantly locate the hottest and coldest temperatures on a live screen, and the camera's ability to overlay a thermal image on top of a digital image for easy on-the-job decision making. HeatSeeker's easy set-up and operation make it a cost effective tool for electrical service, industrial maintenance and building inspection.
